

# SANDFIRE RESOURCES NL

## DRILLING UPDATE - SANDFIRE PROJECT

### **SANDFIRE (Lead, Zinc 100% Sandfire)**

The first drill hole at Sandfire (hole SFMR001) testing target T1 is currently at 1181m. The hole has penetrated the Carribuddy Formation and at this depth should be close to the top of the target Nita Formation.

Drilling has currently stopped due to a break in the drill string at 400m within the cased section of the hole. The driller is attempting to retrieve the drill string.

The planned depth for this hole is 1350m.

Greg Steemson  
Managing Director  
14 December 2005

The information in this report that relates to Exploration Results is based on information compiled by Greg Steemson who is a Fellow of the Australian Institute of Geoscientists. Greg Steemson has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Greg Steemson consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
